MATERIAL SAFETY DATA SHEET
OSHA HAZARD COMMUNICATION RULE

DATE OF LAST REVISION: 10-31-02

CHEMICAL IDENTITY

LABEL IDENTITY
CHEMICAL NAME/SYNONYMS
MAGNESIUM OXIDE
Magnesium Oxide, Natural Periclase, Magnesia, Calcined Magnesia, Magnesia Usta, Magcal, Maglite, Calcined Brucite, Calcined Magnesite

FORMULA
MgO

CHEMICAL FAMILY
METAL OXIDE

CALCULATED MOLECULAR WEIGHT
40.30

CAS REGISTRY NUMBER
1309-48-4, LISTED IN THE TSCA INVENTORY

HAZARDOUS INGREDIENTS

MAGNESIUM OXIDE

%: 100
TLV: 10mg/m³ (as Mg fume)
TWA: 15mg/m³

PHYSICAL AND CHEMICAL PROPERTIES

COLOR, FORM AND ODOR
Colorless to white, very fine powder and pieces, no odor.

BOILING POINT
3600

DENSITY (gm/cc)
No Data

VAPOR PRESSURE @ 20°
NA

% VOLATILE BY VOLUME (%)
NA

REACTION WITH WATER
None

EVAPORATION RATE (H₂O=1)
NA

SOLUBILITY IN WATER
Soluble – Sets to cement-like hardness in water.

MELTING POINT
2500°C to 2832°C

OTHER
Takes up CO₂ & H₂O in air. Soluble in dilute acids, insoluble in alcohol.

FIRE AND EXPLOSION HAZARD DATA

FLASH POINT
3600°C

AUTOIGNITION TEMPERATURE (°C)
NA

FLAMMABILITY
Non-flammable

EXTINGUISHING MEDIA
NA

SPECIAL FIRE FIGHTING PROCEDURES
Wear a self-contained breathing apparatus and full protective clothing to prevent contact with skin and eyes.

UNUSUAL FIRE & EXPLOSION HAZARDS
Magnesium oxide takes up carbon dioxide and water from the air. Combines with water to form magnesium hydroxide. May have a violent reaction or ignition on contact with interhalogens. Incandescent reaction with phosphorus pentachloride.
MAGNESIUM OXIDE
MATERIAL SAFETY DATA SHEET

HEALTH HAZARD INFORMATION

TOXICITY DATA
itr-ham TDLO: 480mg/kg
ihl-hmn TCLO: 400mg/m3

HMIS RATING:
HEALTH: 2 FLAMMABILITY: 0 REACTIVITY: 0 PERSONAL PROTECTION: E

ROUTES OF ENTRY
INHALATION: Yes
SKIN: No
INGESTION: Yes
EYES: No

MEDICAL CONDITIONS AGGRAVATED BY OVEREXPOSURE: Pre-existing respiratory disorders.

EFFECTS OF OVEREXPOSURE (acute and chronic):
INHALATION: May cause cough, mucous production, shortness of breath, nausea, malaise, muscular weakness and paralysis, general depression, ataxia, lithargy, listlessness, poor tendon reflexes, hypotension, cutaneous vasodilation, increased sensitivity of the carotid sinus and cardiac arrest.
DERMAL: May cause redness and itching.
EYE: May cause redness, itching, burning and watering.
INGESTION: May cause gastrointestinal disturbances, skin lesions, nervous afflictions, growth retardation, perihepatic granulomas and fibrous peritonitis.

CARCINOGENICITY: none NTP: no IARC MONographs: no OSHA REGULATE: no

EMERGENCY FIRST AID PROCEDURES:
****SEEK MEDICAL ATTENTION FOR ALL SITUATIONS MENTIONED BELOW****
INGESTION: Administer 1-2 glasses of milk/water and induce vomiting
INHALATION: Remove to fresh air, administer oxygen if breathing is difficult
SKIN CONTACT: Brush material off skin and wash affected area with soap and water
EYE CONTACT: Flush eyes for at least 15 minutes with lukewarm water

REACTION DATA

STABILITY: Stable
CONDITIONS CONTRIBUTING TO UNSTABILITY: None
INCOMPATIBILITY (MATERIALS TO AVOID):
Interhalogens, Phosphorus, Pentachloride, Water, Moisture, Chlorine Trifluoride, Bromine, Pentafluoride.
HAZARDOUS DECOMPOSITION PRODUCTS: Magnesium Hydroxide
HAZARDOUS POLYMERIZATION: Will Not Occur
CONDITIONS TO AVOID: None
SAFE HANDLING AND USE

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: wear a self-contained breathing apparatus and full protective clothing. Isolate the area where the spill occurred and insure that proper ventilation is available. Vacuum up spill using a high efficiency unit and place in a closed container for proper disposal. Take care not raise dust.

WASTE DISPOSAL METHOD:
Dispose of in accordance with local, state and federal regulations.

SPECIAL PROTECTIVE INFORMATION

RESPIRATORY PROTECTION
Wear NIOSH-approved dust-mist-fume cartridge respirator

LOCAL EXHAUST
Maintain exposure below TLV

MECHANICAL (general)
Recommended

SPECIAL
Handle in controlled atmosphere

OTHER
NA

PROTECTIVE GLOVES
Neoprene

EYE PROTECTION
Safety glasses

OTHER PROTECTIVE EQUIPMENT
Wear protective clothing to prevent contamination of skin and clothes

SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING/STORAGE:
Store in tightly closed containers in a cool, dry place. Wash hands and face thoroughly after handling and before eating.

TRANSPORTATION REQUIREMENTS
DOT CLASS: Not Classified
UN NUMBER: NC
IMCO CLASS: NC
OTHER: ND

PRECAUTIONARY LABELING
NONE

THE ABOVE INFORMATION IS ACCURATE TO THE BEST OF OUR KNOWLEDGE. HOWEVER, SINCE DATA, SAFETY STANDARDS AND GOVERNMENT REGULATIONS ARE SUBJECT TO CHANGE THE CONDITIONS OF HANDLING AND USE, OR MISUSE ARE BEYOND OUR CONTROL. ANGSTROM SCIENCES MAKE NO WARRANTY, EITHER EXPRESSED OR IMPLIED, WITH RESPECT TO THE COMPLETENESS OR CONTINUING ACCURACY OF THE INFORMATION CONTAINED HEREIN AND DISCLAIMS ALL LIABILITY FOR THE RELIANCE THEREON. USER SHOULD SATISFY HIMSELF THAT HE HAS ALL CURRENT DATA RELEVANT TO HIS PARTICULAR USE.

NA= NOT APPLICABLE  ND= NO DATA FOUND
OTHER EFFECTS OF OVEREXPOSURE:

The inhalation of fumes of freshly sublimed magnesium oxide may cause metal fume fever. There is no evidence that magnesium produces true systemic poisoning. Particles of metallic magnesium or magnesium alloy which perforate the skin or gain entry through cuts and scratches may produce a severe local lesion characterized by the evolution of gas and acute inflammatory reaction, frequently with necrosis. The condition has been called a “chemical gas gangrene.” Gaseous blebs may develop within 24 hours of the injury. The inflammatory response is marked at the site of injury and there may be signs of lymphagitis. The lesion is very slow to heal.

The toxicity of magnesium compounds is usually that of the anion.

Inorganic fluorides are generally highly irritating and toxic. Acute effects resulting from exposure to fluorine compounds are due to hydrogen fluoride, chronic fluorine poisoning, or “fluorosis,” occurs among miners of cryolite, and consists of a sclerosis of the bones, caused by fixation of the calcium by the fluorine. These may also be some calcification of the ligaments. The teeth are mottled, and there is osteosclerosis and osteomalacia. Large doses can cause very severe nausea, vomiting, diarrhea, abdominal burning and cramp-like pains. Can cause severe bone changes, making normal movements painful. Some enzyme systems effects are reported. Also loss of weight, anorexia, anemia, wasting and cachexia, and dental defects are among the common findings in chronic fluorine poisoning. There may be an eosinophilia, and impairment of growth in young workers. Symptoms of intoxication include gastric, intestinal, circulatory, respiratory and nervous complaints and skin rashes. Common air contaminants.
